

You collect incredibly well from the top 30% of late customers. What happens to the other 70%?

Recovering debt is a complex optimization problem. You spend a lot of efforts placing cases into the right queues or with the right collection agency. At the end of the day, there are always going to be debts that don't get a good treatment. Time and labor cost just aren't worth it.

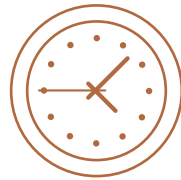

What if there was a way to find and recover money from these debtors?

TrueAccord is the answer. Our customers recover up to 12% from previously unreachable accounts. It's free money that you thought you lost.

TrueAccord's Algorithmic Recovery platform introduces several innovative components.

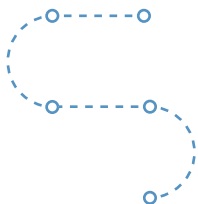

Proprietary skip tracing finds new contact details and information about previously unreachable debtors.

An optimization engine decides the content, time and channel for the best result.

Cross channel integration - contacting debtors via email, text, a website and other unique channels.

A reactive engine tracks the debtor's navigation through our website and follows up diligently to guide them to settlement.

A San-Francisco based expert customer care team handles any queries that need to be handled by a human.

Real-time reporting on debt status and customer communications.

Use TrueAccord's Algorithmic Recovery for debts you previously thought no one could handle and realize higher returns than you ever thought possible. It's time to use technology to handle all the cases traditional collectors leave untouched.
